The async executor of Activiti 5 is the only available job executor in Activiti 6 as it is a more performant and more database friendly way of executing asynchronous jobs in the Activiti Engine. The old job executor of Activiti 5 is removed. More information can be found in the advanced section of the user guide.

By default, Activiti users have process editing privileges and can use the scripting language in a variety of ways. However, if misused, this can be a security risk leading to compromise of the application and its underlying operating system. To mitigate this risk, you may want to disable Script Tasks.

Activiti API is a workflow and Business Process Management system. We can define a process in it, execute it, and manipulate it in different ways using the services provided by the API. It requires JDK 7+. Development using the API can be done in any IDE, but to use the Activiti Designer, we need Eclipse.
