Rates and Outlook

Acute lymphoblastic leukemia (ALL) is a cancer that affects the white blood cells by producing excessive lymphoblasts. AML occurs when a myeloblast goes through genetic changes and freezes in the immature stage. ALL occurs when malignant, immature lymphoblasts multiply in the bone marrow and hinder the production of other normal blood cells.

Difference between AML and ALL | AML vs ALL

Acute leukemia is a malignant neoplastic disease that arises from either the lymphoid cell line (acute lymphoblastic/lymphocytic /lymphoid leukemia, ALL) or the myeloid cell line (acute myeloid/myelogenous/myelocytic leukemia, AML). ALL is the most common childhood malignancy, whereas AML primarily affects adults.
