This would be equal to 5.25 liters of fluid per minute and approximately 14,000 liters per day. Over one year, that would equal 10,000,000 liters or 2.6 million gallons of blood sent through roughly 60,000 miles of vessels. In order to understand how that happens, it is necessary to understand the anatomy and physiology of the heart.

Heart Anatomy | Anatomy and Physiology

Chapter Objectives. After studying this chapter, you will be able to: Describe the anatomy of the male and female reproductive systems, including their accessory structures; Explain the role of hypothalamic and pituitary hormones in male and female reproductive function
