I don't have any shop time on the 3306 but Cat pumps last a long time. First thing I would check after trying a straight pipe is make sure return fuel line is open. Then check Injectors. I know somebody pulled the head off a Cat engine with the Injectors still in and messed the tips up. If this engine has the waste gated turbo make sure that working. Seen one stick causing low power and boost. Not sure if your's has one though.

The exhaust valve guides and or valve stem seals could be worn. Or it could be unburned fuel, from a combustion problem. Take temperature readings from the exhaust manifold, as each port comes out of the head. Usually if there is a big temperature difference between cylinders it could be a faulty injector, faulty valve lash etc.
