Study Guide A

The energy that your cells need comes indirectly from the food you eat. The chemical energy used by all cells is carried by a molecule called adenosine triphosphate, or ATP. ATP is a molecule that transfers energy from the breakdown of molecules in food to cell processes. A molecule of ATP has three

Processes Metabolism is the collective term for the chemical reactions that occur in cells and provide energy to keep cells alive. Some of the energy from metabolism is in the form of heat, and some animals use this heat to regulate their body temperatures. Such warm-blooded animals are called endotherms.
