Critical Point Theory And Its

In thermodynamics, a critical point is the end point of a phase equilibrium curve. The most prominent example is the liquid-vapor critical point, the end point of the pressure-temperature curve that

Read Free Critical Point Theory And Its Applications

designates conditions under which a liquid and its vapor can coexist. At higher temperatures, the gas cannot be liquefied by pressure alone. At the critical point, defined by a critical temperature T_c and a critical pressure p_c , phase boundaries vanish. Other examples include the liquid ...

Behind It? - BreakPoint

A critical point of a function of a single real variable, $f(x)$, is a value x_0 in the domain of f where it is not differentiable or its derivative is 0 ($f'(x_0) = 0$). A critical value is the image under f of a critical point.

Wikipedia

The purpose of this paper is to survey developments in the field of critical point theory and its applications to differential equations that have occurred during the past 20-25 years. This is too broad a theme for a single survey and we will focus on three particular areas.

Since A is an homeomorphism of E onto E and $A(0) = 0$, CRITICAL POINT THEORY AND APPLICATIONS 357 $A^{-1}(B)$ is a neighborhood of 0 in E . Therefore, $E \cap h(B)$ is a neighborhood of 0 in E with boundary contained in $E \cap A(S)$. The interior (in E) of $E \cap h(B)$ is a symmetric bounded open neighborhood of 0 in E .

A critical point is called nondegenerate if the following two conditions hold: (ND1) for each $i \in I(x)$, the vectors $\{ \nabla f_i(x) \}_{i \in I(x)}$ are linearly independent; (ND2) $\nabla^2 L(x, \lambda)$ is regular with respect to the linear subspace where $T(x) = \{ y \mid \nabla f_i(x) \cdot y = 0, i \in I(x) \}$, $L(x, \lambda) = E(x, \lambda)$, $i \in I(x)$
