Birds in a Changing Climate. Birds have been a prominent feature of life on Earth for eons. The adaptations commonly associated with this group of animals, such as feathers, hollow bones, and air sacs, evolved in piecemeal fashion almost as soon as dinosaurs arose over 230 million years ago. 1 Present day birds evolved from theropod dinosaurs, a lineage that includes Tyrannosaurs and Velociraptor.

Birds in a Changing Climate | EnvironmentalScience.org

Birds are present throughout almost every habitat across the globe. No matter where you go, there is always evidence of birds even if you don't see the animals themselves. Things like holes pecked in tree bark by woodpeckers or the remnants of a nest are indicative of the presence of birds.
