Of the 18 isomers of normal octane ( $C_8H_{18}$ ), octane gets its name from the 2,2,4-Trimethylpentane compound, which is highly resistant to auto-ignition. This iso-octane has been assigned the reference value of 100 for testing purposes. The extremely unstable normal heptane ( $C_7H_{16}$ ) molecule is the 0 octane reference fuel.

Because LP gas is a compressed gas, fairly large quantities can be stored in relatively small containers. As a point of reference, LP gas expands at a ratio of 270-to-1. This means that one liquid drop of LP gas would expand to a gas state 270 times greater in volume. LP gas collects in low-lying areas because its vapor density is heavier than air.

Gasoline direct injection (GDI) engines have a significantly better fuel economy by approximately 5–15%, with a lower CO<sub>2</sub> footprint, leading to its rapid and widespread adoption rather than port fuel injection (Brehob et al., 1998). GDI engine technology in SI engines has a higher brake thermal efficiency and power output than conventional port fuel injection (PFI) or multi-point injection ...

Diesel engine fuel-injection systems are typically designed to provide injection pressures in the range of 7 to 70 megapascals (1,000 to 10,000 pounds per square inch). There are, however, a few higher-pressure systems. Precise control of fuel injection is critical to the performance of a diesel engine. Since the entire combustion process is controlled by fuel injection, injection must begin ...

JOINT BASE SAN ANTONIO-RANDOLPH, Texas (AFNS) -- To help reduce the spread of COVID-19 and keep Airmen safe, 20E5 and 20E6 promotion testing was previously suspended and resumed when deemed safe by installation commanders. Although most testing centers have resumed operations, social distancing precautions have significantly impacted the number of Airmen able to test per session.
