LibGen is a unique concept in the category of eBooks, as this Russia based website is actually a search engine that helps you download books and articles related to science. It allows you to download paywalled content for free including PDF downloads for the stuff on Elsevier's Science Direct website. Even though the site continues to face legal issues due to the pirated access provided to books and articles, the site is still functional through various domains.

We present an overview of the techniques used for nonlinear time series analysis, to detect nontrivial structures in such time series data that will indicate the nature of underlying dynamics that produce the data. We start with the method of time delay embedding that can be used to reconstruct the dynamics in higher dimension.
