16.6.1. Introduction¶. multiprocessing is a package that supports spawning processes using an API similar to the threading module. The multiprocessing package offers both local and remote concurrency, effectively side-stepping the Global Interpreter Lock by using subprocesses instead of threads. Due to this, the multiprocessing module allows the programmer to fully leverage multiple ...

Configuration File¶. The Supervisor configuration file is conventionally named `supervisord.conf`. It is used by both `supervisord` and `supervisorctl`. If either application is started without the `-c` option (the option which is used to tell the application the configuration filename explicitly), the application will look for a file named `supervisord.conf` within the following locations, in the ...

Therefore, buying the beans is part of another process, and you shouldn't include it in your documentation. Try this pre-publish checklist for standardizing your processes. If you're thinking "I don't have time to create my own style guide - I'll document my processes first, then standardize them later", then stop right there.

Authorization flow. OAuth is an authorization protocol that contains an authentication step. OAuth allows a user (resource owner) to grant a third-party application (consumer/client) access to their information on another site (resource). This process is commonly known as the OAuth dance. Jira uses 3-legged OAuth (3LO), which means that the user is involved by authorizing access to their data on ...

This is by no means rocket science, but over time I've created a template that I now tend to use and have been asked to share. Conveniently when the time comes to publish an API externally, this serves as an invaluable tool for creating public documentation. You can see the markdown template alongside an example in this gist.

For example, on Windows systems using the FAT or FAT32 file systems, `st_mtime` has 2-second resolution, and `st_atime` has only 1-day resolution. See your operating system documentation for details. Similarly, although `st_atime_ns`, `st_mtime_ns`, and `st_ctime_ns` are always expressed in nanoseconds, many systems do not provide nanosecond precision.
