In the dropdown menu beneath the name box, choose the Python file type. If you are using Notepad (not recommended), select "All Files" and then add ".py" to the end of the file name. Make sure to save the file somewhere easy to access, as you will need to navigate to it in the command prompt. For this example, save the file as "hello.py".

Python allows for user input. That means we are able to ask the user for input. The method is a bit different in Python 3.6 than Python 2.7. Python 3.6 uses the `input()` method. Python 2.7 uses the `raw_input()` method. The following example asks for the username, and when you entered the username, it gets printed on the screen:
