The founding of modern biology. The study of living matter lagged far behind physics and chemistry, largely because organisms are so much more complex than inanimate bodies or forces. Harvey had shown that living matter could be studied experimentally, but his achievement stood alone for two centuries. For the time being, most students of living nature had to be content to classify living forms as best they could and to attempt to isolate and study aspects of living systems.

The history of science and technology is a field of history that examines how the understanding of the natural world and the ability to manipulate it have changed over the millennia and centuries. This academic discipline also studies the cultural, economic, and political impacts of scientific innovation. Histories of science were originally written by practicing and retired scientists, starting primarily with William Whewell, as a way to communicate the virtues of science to the public. In the
