It is necessary to understand how to break a vector into its x and y components in order to solve problems for projectiles.. Break the Initial Velocity Vector into its Components. Apply the Kinematics Equations. To work these problems, separate the “Big Three” equations into two sets: one for the vertical direction, and one for the horizontal.

The rapidity with which momentum is exchanged over time is determined by the forces involved in the collision. This is the second of the five fundamental conservation laws in physics. The other four are conservation of energy, angular momentum, charge, and CPT. (See Feynman's Diagrams for an explanation of CPT.) Chapter Outline
