The contribution of architecture theorist Mark Wigley to the 1998 issue of the architecture journal Daidalos, dedicated to the 'co-construction' of atmospheres, questioned why the notion lacks attention within the profession. He argued that the discussion of atmosphere in architecture entails, by definition, a certain ambiguity.

This paper addresses air as a constituent material of space and a primary mediator between human body and the environment. We propose the notion of architecture of air that is not only concerned with rigid matter as a determinant of space but primarily with forms of energy within a given spatial framework, such as heat transfer, air flow, light scattering or electromagnetic fields.

In human cells, the basal body (BB) core comprises a ninefold microtubule-triplet cylindrical structure. Distal and subdistal appendages are located at the distal end of BB, where they play indispensable roles in cilium formation and function. Most cells that arrest in the G0 stage of the cell cycle initiate BB docking at the plasma membrane followed by BB-mediated growth of a solitary primary ...
